

About ImmunTraCkeR® and ImmunTraCkeR® Dx

ImmunTraCkeR® is a proprietary immune molecular diagnostics assay, which evaluates a patient's immune status in the blood based on combinatorial T cell diversity. Unlike most companion diagnostics tests, ImmunTraCkeR® is patient-specific rather than drug- or disease-specific, as it approaches the disease from the patient's own immune system perspective.

ImmunTraCkeR® is currently being validated as immune companion diagnostics for cancer immunotherapy in the PredictID clinical programs. ImmunTraCkeR® aims at overcoming the current challenges in immuno-oncology: personalizing cancer immunotherapy to allow patients to receive efficient treatments, while sparing them from side effects and saving unnecessary costs to the healthcare system.

ImmunTraCkeR® Dx is a laboratory-developed test (LDT) available to doctors in medical routine through ImmunID's CLIA services. ImmunTraCkeR® Dx is CE-marked.
